Abstract

Aim of the article

The aim of this article is to reflect the presentation of phaleristic materials in the form of thematic badges and brooches devoted to the anatomy of the human chest.

Research hypothesis

During preparation for this study, his author put forward a working hypothesis, the essence of which was that, in his opinion, there should be a significant number of the most diverse collecting materials (phaleristic, philatelic and numismatic), thematically dedicated to both anatomy and topographic anatomy of the human chest, which were released in different countries.

This author's research article presents the results and comments on the reflection in phaleristics, on thematic badges and brooches, in plot drawings, of the human spinal column, its individual parts and vertebrae. As illustrations for the text of the article, the author uses screenshots of thematic icons and brooches, used illustrations taken from various sites on the Internet, accompanied by additional comments. In total, this research article presents 88 phaleristics illustrations. All thematic badges and brooches are presented in their own subsections, with an arbitrary number of them.

Keywords: human anatomy; human chest; phaleristics; thematic badges and brooches; screenshot copies

Introduction

The study of human anatomy, as one of the most important sections of medical science, and even more so, in the light of its practical use, in thoracic and cardiac surgery, is always an important and urgent issue of research. A scientific study conducted by the author of this article, using the forces and means of collecting in this study, makes them especially interesting and exclusive. In this scientific article, which is the next in the series of original, scientific, copyright articles, in particular, in anatomy and different directions of surgery, where the author uses, as illustrations, the means of phaleristics. This innovative, exclusive approach, skillfully used by the author, has already brought success to more than 750 articles of the author, dedicated to medicine and its various clinical ones.

Method and materials of the study

When writing this research article, its author uses methods such as literary and critical analysis of all available, at the time of writing of domestic and foreign sources of information. After careful selection and

systematization of the selected illustrative material, it was divided into subsections and all the illustrative materials found were transformed by the author into screenshots, and used in this article, as thematic illustrations, with strict adherence to copyright and the mandatory indication of the sources of their borrowing on the Internet.

Results of the study and discussion

I would like to start the presentation of the phaleristics materials found in the form of thematic icons with the presentation of such a department of the human musculoskeletal system, and the parts of the human skeleton-its chest, which are represented, in Figure 1, in total-81 copies of screenshots, thematic badges [1-7].

Figure 1: Thematic selection of badges, with the image of a human chest

Figure 2: is presented, a small, collection selection, thematic brooches, in a number of 17 copies, with the image of a human chest. All of them are made of different materials, metal and plastic masses, at a high artistic level [1-7].

Figure 2: Thematic brooches, with the image of a human chest

On this, another, another, author, research article devoted to reflection, in phaleristics, on thematic badges, anatomical features of bones and joints, human chest.

Conclusions

1. The anatomy of a person and, in particular, such a section such as osteology is quite fully represented by such a section of collecting as phaleristics.
2. The use by authors, as screenshot-illustrations, in this and others, is quite appropriate, and-colorfully and creatively, decorates, this and other articles.

3. The purpose of the study and the hypothesis put forward by the author, when writing this research article, were completed and confirmed by the author, in full.
